Decision Foundry
DATA CONSULTANTS

DEVELOPMENT PROCESS

Our agile process for delivering measurably better data experiences.

01 DEFINE

A stakeholder interview starts the process. We clearly define the requirements, audience, data,and scope of your project. Our DETA Template determines exactly what a project needs to be delivered and measured, successfully.

02 DESIGN

Next, we conduct research and model the proposed data application using mood boards, sketches, wireframes, and prototypes. This gives our stakeholders an opportunity to validate our suggested solution before the build.

03 BUILD

Time to ingest, orchestrate, and visualize the data. This step provides a clear roadmap to what data, drilldowns, actions, pre-viz, and business rules are required to proceed.

04 DELIVER

Data literacy and fluency are at the core of what we do. We present the final product and confirm successful handoff and adoption through documentation and formal platform training.

05 ACT

The final step: Insights to decision-making. Now that stakeholders understand the platform and data, we promote action through accountability, goal setting, ownership, and ongoing communication.

PERFORMANCE DRIVEN. DECISION LED.

We combine front-end elegance with back-end excellence
